Is it time for a tune up?

A key component of any Dynamics AX deployment is to keep everything related to it in top working order. A periodic review of all servers, databases and infrastructure are an important part of keeping Dynamics AX running at optimal efficiency. A thorough review should include:

- Review of infrastructure including: cabling, routers, switches, hubs, etc.
- Server performance monitoring and optimization.
- Microsoft SQL performance evaluation and clean-up.

Did you know?

Did you know Microsoft has a managed newsgroup that you can submit questions to and receive feedback from other users as well as Microsoft?

Other features of the Newsgroup:

- Answers can be flagged for correctness/helpfulness.
- You can review the author's profiles.
- You can subscribe to threads and be notified of new responses.
- You can submit product suggestions for future releases.

To learn more about the managed newsgroup or to register go to:

<https://mbs.microsoft.com/customersource/newsgroups>
(You will need to register for a Microsoft LiveID)

- Review of desktop performance and maintaining minimum standards for compliance with Dynamics AX requirements.

If you notice any degradation in the performance of your Dynamics AX system, it is important to have a qualified individual review these items. If you do not have an experienced, qualified person on your staff Agility Business Solutions Technical Consultants are available to conduct this service. Contact your Agility Business Solutions representative for pricing and details.

Blog

Agility Business Solutions is pleased to announce our new blog The Agile Manufacturer. The Agile Manufacturer is a blog developed and maintained by the professionals at Agility Business Solutions headquartered in Cleveland, Ohio.

This blog will be a clearinghouse for information related to manufacturing systems and practices. We will share material related to manufacturing systems and lean policies, practices, procedures and philosophies.

Tips and Tricks

Table	Field	Criteria
Sales orders	Requested ship date	(dayrange(0,7))

Here is an example of Orders with a Header Requested Ship Date from Today through the next week.

Ever wish you could filter your data with phrases like “last 30 days” or “from now until 7 days from now”? In AX 2009 you can! Here’s how:

- today() or t Populates Criteria with Today’s Date Only
- ..today() or ..t Up through Today’s Date
- today().. or t..Today’s Date & After (day(0))
- Populates Criteria with one Date with 0 (zero) being today’s Date
- (day(-7)) 7 Days Ago
- (day(7)) Days From Now
- (lessThanDate(0)) Up through Today’s Date
- (greaterThanDate(0)) Today’s Date & After
- (lessThanDate(-7))Up through 7 Days Before Today’s Date
- (greaterThanDate(-7)) 7 days before Today & All After
- (lessThanDate(7))Up through 7 Days After Today’s Date
- (greaterThanDate(7))7 days after Today & All After
- (dayRange(0,-30))From today “0” & Back 30 days “-30”
- (dayRange(0,30))From today “0” & Forward 30 days “30”

It’s that simple! If you have any questions please contact your Agility Business Solutions Representative.

User Groups

AXUG

AXUG is a great resource for organizations that are using, or considering using, Dynamics AX. AXUG offers regional and national meetings as well as webinars regarding a variety of AX-related topics. To learn more or to join go to
